

Fractal world

Family program

(for preschoolers and primary school children/teenagers)

The course is designed for specialists who work with both children and families. It tells about:

- problems that can be solved with the help of FDM in child and family psychology
- about the features of presenting information to children of different ages
- examples of how various children's features can be solved together with parents

This children's program is created for adults:

Parents. Relatives in the family. Educators. Teachers. Psychologists. Representatives of different areas of children's medicine.

Psychotherapists. Defectologists. Rehabilitation specialists. Social workers.

And many other related specialists working with children.

The first and only condition in auxiliary and developmental activities with children of preschool and primary school age, using the Fractal Drawing Method, is: - Mandatory personal practical work experience and personal results in diagnostic and corrective technologies of FDM.
