

Fractal Numerology

The level of mastery at which you combine the skills of fractal drawing with the theory of numerological relationships according to the author's methods of Tanzilia Poluyakhtova.

The uniqueness of fractal numerology is that the analysis is carried out not only by the date of birth of the person himself (after all, more than one thousand people are born on the same day), but in combination with the dates of birth of his parents and other relatives. And as a result, a unique picture emerges, consisting of the dates of birth of close relatives and the dates of vital events, which carries all the information about the fate of a person. And you can learn to extract this information and use it with benefit.
